1. Introducción 3
2. Listado de Puntos 4
Anexo I: Memoria Básica de los Trabajos de Topografía 152

1. Introducción

Para la obtención de la topografía del proyecto se ha realizado una campaña topográfica en abril de 2023 por parte de la empresa CTIN ASISTENCIAS TÉCNICAS SL, consistiendo esta en:

- Levantamiento topográfico en la zona de la balsa.
- Fotografías geolocalizadas a lo largo de las redes principales de riego.
- Corroboración de los valores altimétricos LIDAR en las redes de distribución.

2. Listado de Puntos

Dado que toda la información obtenida mediante los trabajos de topografía se ha entregado en formato digital, y la extensión de la información supera la capacidad de listar todos los puntos en un documento de estas características, se procede a exponer los puntos del modelo TIN utilizado en las Balsas, cuyos son los siguientes:

Listado de Puntos de la Balsa Infiernos

1. OBJETO

El siguiente documento tiene por objeto describir los trabajos realizados, en concreto levantamiento topográfico de las zonas donde se construirán las futuras balsas del rabajo "PROYECTO DE INFRAESTRUCTURAS DE ALMACENAMIENTO Y RED DE RIEGO DE LOS REGADÍOS TRADICIONALES DE MONTAÑA DE LA COMUNIDAD DE REGANTES DE JERTE (CÁCERES)."

Además del trabajo de levantamiento topográfico de las balsas, se ha realizado una revisión de campo de los trazados referentes a las tuberías de captación, y tuberías de distribución primarias recibidas del anteproyecto o documentación anterior.

Durante las visitas se han recogida las propuestas de modificaciones de trazados solicitadas por la comunidad regantes. La documentación referente, se ha documentado mediante reportaje fotográfico, posicionamiento en planta a través de ortofoto, y referenciada en altura a través de modelo digital extraído de las nubes de puntos LIDAR del vuelo PNOA, todo ellos para facilitar la comprensión al futuro proyectista. La documentación relativa a éste apartado tiene carácter informativo.

1.1. DATOS DE PARTIDA

Para la realización del trabajo, se parte de unas premisas de calidad, el primer concepto es realizar un levantamiento topográfico orientado a la ejecución de unas balsas. En este tipo de proyectos el objetivo de conocer la topografía del terreno con exactitud cobra una vital importancia, pues se proyectan movimientos de tierras.

El área de estudio viene determinada por la localización del encargo:

Imagen 1 – Parcela de estudio. Balsa Zona infiernos.

Imagen 2 – Parcela de estudio. Balsas zona Papuos.

2. SERVICIOS

2.1. TOPOGRAFÍA INICIAL

El alcance de los trabajos ha sido, el levantamiento del terreno mediante técnicas GPS combinado con vuelo Drone, ya que ésta ha sido la mejor opción para tener la constancia de la cota en cada punto del terreno.

El proceso de los trabajos ha sido el siguiente:

1. Geodesia. Se enlazado con la geodesia nacional mediante GPS en el sistema ETRS89. La primera base se establece enlazando con la red de bases del IGN mediante NTRIP. A partir de ahí, se han radiado diferentes bases mediante enlace Base-Rover vía Radio.
2. Toma de datos en campo mediante GPS.
    a. Se ha realizado una toma de datos de puntos de control, bases de replanteo y puntos de relleno mediante ésta técnica.
3. Vuelo mediante DRONE para obtención de ortofoto y puntos fotogramétricos.
    a. Se ha realizado un vuelo mediante DRONE, con altura 100 metros y solapes 70-80.
    b. Se han procesado los datos de vuelo hasta obtener ortofotografía y nube de puntos filtrada y corregida hasta nivel de suelo.
    c. Se ha obtenido una nube de puntos en cota de superficie para localizar las alturas y posiciones de los elementos altos (árboles, edificios, etc…).

2.2. TRABAJOS MEDIANTE DRONE

La parcela objeto de estudio es apta para el vuelo, por lo que se ha realizado un vuelo, con la altura y pasadas suficientes para obtener una ortofoto georreferenciada de la parcela.
Los parámetros utilizados han sido:
1.- Solapes: 80% Longitudinal - 70% Transversal
2.- Altura del vuelo: 100 metros.

Mediante software especializado se ha realizado la planificación del vuelo. Sobre el terreno se han materializado dos puntos de apoyo para poder obtener la posición y escalado correctos del trabajo.

El producto obtenido es una imagen goerreferenciada, entregada en diferentes formatos. En primer lugar se entrega una ORTOFOTO en formato TIF, que recoge el total del trabajo. De ésta imagen se entregan dos subproductos, que son dos ortoimágenes en formato JPG, aligeradas en resolución para su adecuado funcionamiento en entornos CAD.

2.3. MODELO DIGITAL DEL TERRENO

El modelo digital del terreno abarca la zona de actuación recibida en el encargo. Los datos para la realización del modelo digital de terreno proceden del levantamiento topográfico realizado mediante GPS y DRONE. Para la triangulación y representación correcta del modelo se han insertado líneas de rotura que definen los cambios de pendiente del terreno a lo largo de toda la superficie.
Los puntos procedentes del trabajo de fotogrametría, han necesitado ser filtrados para obtener las cotas relativas al terreno. El primer filtrado se realiza con el programa METAHAPE, utilizando parámetros referentes a ángulos, distancia máxima de los puntos de ruido al suelo, y tamaños de las celdas de estudio. El segundo filtrado consiste en la revisión manual de la nube de puntos. Y la última parte del filtrado se logra generando el modelo de terreno, en éste paso se simplifica la nube, en éste proyecto, la configuración óptima la ha dado el filtrado por ángulos, debido a que es una superficie abancalada, la pendiente esperada ha de ser menor de 3º, combinación que produce la eliminación correcta de vegetación. El modelo de terreno obtenido corrige la vegetación, el labrado y la esponjosidad.
Para comprobar el modelo obtenido se realizó una toma de puntos a posteriori, con la que se certifica que el modelo generado cuenta con los siguientes datos:

- Tolerancia en planimetría: +/- 5 cm
- Tolerancia en altimetría: +/- 5 cm

Adicionalmente al modelo digital del terreno obtenido, se suma el modelo digital de superficie obtenido mediante DRONE. En éste modelo, quedan recogidas las alturas de todos elementos presentes en la parcela, como árboles, postes eléctricos, edificaciones y otros elementos singulares. La precisión del modelo digital de superficies, cuya utilidad se relega a obtener información para elementos que puedan proyectar sombras está por debajo de 5 centímetros.

2.4. SISTEMA DE REFERENCIA GEODÉSICA Y PRECISIONES

Todos los entregables están en referencia ETRS89, huso 30. Para la implantación del sistema de referencia, se ha partido de la red de posicionamiento NTRIP del Instituto Geográfico Nacional. Una vez enlazados, se ha tomado una base de referencia, desde la que se han radiado el resto de bases del proyecto.

Los puntos del total del levantamiento topográfico, forman un bloque entre sí y con respecto a las bases de proyectos con las precisiones típicas de la técnica, XYZ= 1,5 centímetros.

3. CONFIDENCIALIDAD

La parte contratante se compromete a:

Manejar de manera confidencial la información que como tal le sea presentada y entregada, y toda que se genere en torno a ella como fruto de la prestación de sus servicios.

Guardar confidencialidad sobre esa información y no emplearla en beneficio propio o de terceros mientras conserve sus características de confidencialidad o mientras sea manejada como un secreto empresarial o comercial. Solicitar previamente y por escrito toda la información que el servicio genere será propiedad del Cliente.

4. CALIDAD Y VERIFICACIÓN DE EQUIPOS

Los medios empleados para el levantamiento han sido:

1.- Equipo GPS TOPCON. Modelo HIPERPRO. Nº Serie: 343-0130

2.- Equipo GPS TOPCON. Modelo HIPERPRO. Nº Serie: 343-0301

4.- Vehículo 4x4

5.- Drone PHANTOM 4 RTK.

6.- Software específico.

Geodesical® Technological Instruments

CERTIFICADO DE VERIFICACION GPS

Nº Certificado : 23-0015 ***Fecha Expedición:*** 15/01/2023

DATOS DE CLIENTE: **JAVIER JARA JIMENEZ**
C/ San Nicolás 25, 1º E
Corvera-Murcia
NIF: 08878853-W

DESCRIPCIÓN DEL INSTRUMENTO:

MARCA: TOPCON
MODELO: HIPER PRO Base
Nº SERIE: 343-0130

Características del equipo: Precisión estático RTK

Horizontal	10 mm	1ppm
Vertical	15 mm	1ppm

PATRON UTILIZADO: Base geodesical GPS1 Coordenadas:
