Avances de superficies y producciones agrícolas. Septiembre 2015

Se presentan las estimaciones disponibles de los cultivos y grupos de cultivos de mayor importancia en España, correspondientes al **30 de septiembre de 2015**. Se elaboran con las **informaciones remitidas por las Comunidades Autónomas**, tienen carácter coyuntural y se actualizan mensualmente.

Cereales

Las estimaciones **de producción de los cereales de otoño-invierno, campaña de comercialización 2015-16**, sitúan la **cosecha de 2015 en 14,3018 millones de toneladas**, un 3,2% inferior a la de la campaña precedente. Por cultivos, sin embargo, se presentan variaciones de distinto signo. Descienden trigo blando (-4,4%) y cebada de dos carreras (-7,9%) y registran ascensos centeno (+22,7%), trigo duro (+14,7%) y avena (+16,3%). La cebada de seis carreras y el triticale apenas varían (-0,4% y -0,3% respectivamente). La superficie cultivada presenta variaciones del mismo signo que la producción (-1,5% para el grupo), salvo en triticale, cuya superficie aumenta un 8,8%.

Ambas cosechas, de 2015 y 2014, hablando del grupo en general, distan mucho de la excelente producción de la cosecha de 2013, debido a las diferentes condiciones meteorológicas producidas.
